Avg. Time on Website: 17 minutes

Approximate number of comments related to a project or program shown in green. Items that were addressed in less than 5 comments do not have quantities.

### Support for Facilities, Programs, or Projects Already on the Matrix

- Climbing gym/bouldering area (approx. 18 comments supporting)
  - empowered learning, addition of new activity, needs of younger residents, year-round, competitive differentiator, self-sustainability
  - would like to see this at Basin Rec.
- Off-leash dog areas (city/basin, and public lands)/dog parks (approx. 7 comments supporting)
  - somewhere between Jeremy and Kimball, with water, comfortable benches, shade, trash cans/poop bags, and enough space for Frisbee, and memorial tree where dog owners can purchase ornaments to hang on trees in memory of their pet, money would go to maintaining the park
  - Gorgoza dog park
  - To get good exercise, better for dogs to be off-leash, exercised dogs behave better than non-exercised dogs, need more clear areas where dogs can be off-leash and their owners can run and bike, etc.
  - Support dogs on trails

- Official dog park in Old Town with grass, trees, and seating areas
- Pickleball courts (indoor at MARC, outdoor on tennis courts, and actual pickleball courts)
- Indoor 50m swimming pool/world class high-altitude training center, recreational pool (slides, lazy river, indoor tubing, etc.), instructional area for classes, new aquatic center (approx. 60 comments supporting)
  - supported by the survey
  - too many people using the existing facilities at the same time for different purposes
  - expand at Ecker, and expand parking at Ecker (will benefit fields as well), don't build a separate pool
  - warm water pool for swim lessons, especially for 6-10 year olds, need to maintain a smaller indoor pool with warmer water for those with health issues/sensitivities to water temperature
  - Separate learning pool for younger children/handicapped individuals
  - Kid/family friendly area including party rooms
  - Separate hot tub
  - Upgrade locker rooms
  - Additional parking
  - Build a separate pool in a more centrally located area
- Second ice sheet (approx. 162 comments supporting)
  - Expand existing facility or build new two-sheet arena, with other uses during the off-season like convention space, Sundance, storage, field house, etc.
  - Build new 2-sheet facility and use current Ice Area for indoor fields
  - corporate events bring in significant revenue to arena and can't accommodate them much of the time
  - use as roller rink in summer when demand is less
  - repurpose existing facility as indoor roller/hockey field and soccer/football field and build
  - accommodates: ice hockey, figure skating, speed skating, curling, sled hockey, and public lessons/recreational use

- too many users/types on ice at same time is unsafe
- Need more ice to be able to expand ice hockey youth and adult programs and tournaments
- Add pool, weight room, track, and second sheet of ice at existing ice arena, climbing wall, field space, more off ice equipment at Ice Arena (equipment and space for athletes to train while off the ice), storage, more lockers, event space (facility in Aspen, Colorado is a good example), more seating, a spa, food/snack bar, and a family-friendly sports-oriented restaurant
- Keep all ice at existing location
- Consider outdoor rink, or in non-insulated building
- Build in a different location closer to Kimball Junction
- Warmer building comfortable for spectators
- Olympic Oval has speed skating track, indoor rink, and indoor field
- Bowl-like sitting area
- Ice sheet for figure-skating only
- Indoor fields (football, lacrosse, soccer, etc.) (approx. 31 comments supporting)
  - Indoor turf or cover at Quinn's and Matt Knoop
  - temp winter covers on Givins and Matt Knoop turf like Silver Mountain Pool
  - Will serve more than another ice sheet
- Outdoor fields (football, lacrosse, soccer, etc.)
  - More sports fields around Ice Arena
- Outdoor tennis courts
  - Need courts that can be used free-of-charge
  - Preferably close to the high school and in conjunction with the School District
- Trails of all kinds (approx. 19 comments supporting)
  - Supported by survey results
  - Serves wider cross-section of community than other uses

- Connect for kids' safety and to get more cars off the road
  - Connect neighborhoods
- Paved trail from Summit Park to Gorgoza Park asphalt trail with hiking/biking trailhead at the west end of Summit Park at the County line (5-6 miles of trail)
  - Was being planned and was part of last bond proposal which passed, disappointed that this has not been constructed, should be given very highest priority
  - Safer alternative to school
  - Should be connected to proposed trail from west side of Summit County to Bonneville Shoreline Trail (which would then connect Old Town Park City and Salt Lake City)
- Connecting trails to the Utah Olympic Park and more integration with Pinebrook Trails
- More directional trails
- Trails that are hiking/biking only to prevent user conflicts
- Bike/pedestrian trails/paths near Jeremy Ranch School/Pinebrook area and Quarry Village (underpasses under Rassmussen Road in two locations to get kids to the school)
- Bike/pedestrian underpass under I-80 would allow all Jeremy Ranch residents (adults and kids) to get to Quarry Village, Ecker, and Kimball Junction
- Connecting bike trail from Tanager to new tunnel at retail stores
- Connecting to Parley's Trail from Park City to Jordan River
- Connect existing paved trails Old Ranch Road and Highland Drive
- Expand trails from Summit Park (Short Stuck Road to WOS) to Toll Canyon, and connect Mill Mountain at the Canyons or in Pinebrook
- Extend the Mid-Mountain trail from bridge directly south of Pinebrook (Hunter's Trail) to the high point on Road to WOS. If connector trail contoured between these two points, Mid-Mountain would then extend from Deer Valley to Summit Park trailhead.
- Expand mountain biking/hiking trails to Kamas and Midway
- Not in favor of more paved trails
  - snow melts too fast on paved trails in winter (consider using a lighter colored pavement for any multi-purpose trails that are paved)

- commuter paved biked trails should be located along existing roads instead of paving dirt trails in more “natural spaces”
  - Okay to have bike only and hike only trails to prevent user conflicts
  - Support single-track dirt trails (don't pave it away!)
  - Continue investment in new trails, trailheads, and parking facilities (all mountain biking, jumping, cross country and other types of trails)
  - Safer crossing for the Rail Trail at Highway 248
  - Trail for west side of 224 connecting Park City nursery to McPolin Barn so more cyclists can use the tunnel under 224 at the barn
  - Soft urban trails should be ranked highest (high potential benefit and relatively low cost)
  - More Nordic trails
  - More trails in new open space acquisitions including Toll Canyon and Hi Ute Ranch
- Fitness rooms, weights, classes, spin studio/women's aerobic studio, yoga/pilates studios
  - Consider co-locating with pool expansion at Ecker
  - Additional space for aerobics, yoga, spin, and zumba at Newpark/Basin Rec.
- Golf learning facility/Golf practice facility
- Indoor tennis courts
  - want 6 more
  - Two more tennis courts at MARC (clay would be nice)
- Outdoor pool
- Indoor gym
- Playgrounds
- Indoor hard courts
- Equestrian areas
  - Keep safe trails open for horseback riding
  - Preserve those areas created with horses in mind

- Volleyball courts
- Indoor basketball courts
- The following comments were drawn on maps at the public input sessions:

## Support for Facilities, Programs, or Projects Not Included on the Original Matrix

- Women's only fitness areas
- Centralized sports complex
- Skating treadmill
- Solar surf
- Platform tennis
- Outdoor exercise facilities (gym)
  - Round Valley along trails or by the fields would be a great location
- Indoor multi-use space/Special events center
  - Would serve the greatest number of users
- Another rec center/full service fitness facility (affordable) (approx. 6 comment supporting)

- more indoor spaces for teams but also for teens who aren't on a team, like Heber City's facility
- Outdoor shooting facility (trap, skeet, and possibly rifle)
- Expand trailside bike park, add pump track, more features for downhill bikes, proposed advanced line
- Indoor velodrome (indoor cycling track)

## Support for Specific Sub-Categories, Programs, or Existing Facilities

- Promote youth curling and curling in general, learn to curl programs and camps, curling tournaments, corporate curling events (need more ice for this)
- Need additional water aerobics classes throughout the week
- Replace/update water aerobics workout equipment
- Loves mountain bike and round valley ski trails
- A lot of money spent on fields and trails, and they get a lot of use
- Loves fields, trails, and parks
- Use trailside dog park 6-7 days per week
- MARC facility and staff are outstanding
- Use Blackhawk/Glen Wilde Trail often – doing a great job on maintenance
- Glad to see new indoor field being added at Fieldhouse
- Add pool, weight room, track, and second sheet of ice at existing ice arena, use Newpark as conference center and multi-use fields, and Ecker can become school use only.
- Get rid of adult hockey league
- Limit use of Ice Arena to legal Park City residents
- Enforce dog parks and leash laws – too many dogs off leash in parks with kids
- Basketball court at Basin Rec.
- Expand lap swim hours on Tuesdays and Thursdays, expanded hours/days for lap and open-swimming

- Rather than build a new pool, can we just replace upgrade the pool at the MARC?
- More indoor fitness programs
- Outreach for Latino community
  - information in Spanish on websites, hard copy, registration forms translated into Spanish
  - make the many and varied opportunities easily available to Latino community
- Need fun, recreational activities for aging population, like curling.
- Activities that families can do together
- Are enough soccer fields currently
- Childcare at Kimball Junction Rec. Center
- Mirrors in classrooms and working mics for instructors
- More fitness classes at Basin Rec. like power hour, HIT, and other circuit training
- Use vans for possible transportation needs for Latino community
- MARC done beautifully!
- Trailside small rec space needs more appropriate flooring for high impact exercise
- More adult tennis programs (men's or mixed)
- Lots of trail use by Salt Lake residents even though we pay tax dollars for the trails
- Mixed feelings on directional trails
- Dogs
  - In Arizona, every dog is on leash – was surprised how well that went.
- No ice sheet – operations too expensive
- Kayak classes at Ecker
  - Would need storage, fundraiser or company to donate boats, tied to NAC?
- Canine good citizen off-leash certification program (such as through AKC)
- Thanks for doing such an awesome job with trails and open space

- Expand girls' youth hockey program within already-established program (approx. 11 comments supporting)
- Outdoor pool not a good use of money
- Upset the tennis courts will be renovated during fall playing time and high school tennis season
- Keep vast sections of Toll Canyon O.S. off-limits to bikes
  - some trails are too steep, and worry about the damage to environment, disturbing wildlife, and the speed mountain bikers may travel
- Open space and wildlife habitat preservation are extremely important
  - Don't want to lose sight of the open space with the natural beauty of Park City. Too much grass mars the view and too much “park” development commits future generations to expensive support. Try to strike a balance.
- Enjoying additions at MARC and Fieldhouse
- Insulate all ice facilities
- Building onto existing facilities, such as an enhanced pool at Ecker, would be welcome
- Uniformly manage all public tennis courts (maintenance, access, and programming)
- Not everything has to be within 3 miles of our home.
- Cooperative membership between the Fieldhouse and MARC?
- Would like to see SBSRD manage/operate all county-wide athletic facilities and programs and PCMC give up this role. Could also manage PCSD athletic facilities after school hours

## Comments on Process, Criteria, Matrix

- Survey and demand study results should dictate what gets prioritized. Don't think current criteria should be applied separately.
- Criteria should include:
  - Usefulness in relation to age
  - Multi-purpose use
  - Potential revenue recovery

- High potential benefit (convenience, utility, high-use) and low cost
- Something not already found here
- Public facility that provides a typically private role
- Financial self-sustainability
- Some measure of cost, both capital expenses and operating expenses should be considered
- How many people currently use the facility (should be heavily weighted)
- Existing facilities being used at maximum capacity should get high points (like Ice Arena and Swimming Pool)
- Number of people who participate in those activities (more use indoor fields than use ice facilities)
- Cost/Benefit
- Economically best for Park City/What would bring others here year-round
- Number of community members served plus number of community member demand
- Current utilization
- Economic catalyst
- Revenue generation as a multi-purpose space
- Ability to expand use in Park City in off-season
- Frequency of offerings and distance between facilities, programs
- Age groups served (youth through adult)
- Land-Grants
- Where growth is and isn't an option
- Use by broad population (youth/adult and local/visitor)
- Prioritize kids heavily
- Bang for the buck – most people served by dollars spent
- What facility has the most year-round need?
- Environmental responsibility (wildlife displacement)

- Healthy lifestyles
- Community engagement (especially youth and teens)
- Land availability
- Utilize public money, a bond issue or a private-public partnership
- 3 columns associated with sponsorship (may be triple weighting something that should just be one criteria)
- Need and desire shouldn't be over-ruled by cost and revenue potential
- Criteria “available elsewhere in the region” is not fair if existing facilities are being used at full capacity
- 47,000 in growth seem very high
- Collaboration between Wasatch and Summit Counties for trails in new growth areas along 248 and I-40?
- Cooperation between Summit and Wasatch Counties?
- Score on Ice Sheet – other ice within an hour's drive, but time is limited
- What is the role of Summit County? Were all Summit County residents surveyed?
- Totally agree with this. Add up the number of people -- adults and kids -- who play soccer, football, flag football, lacrosse, baseball, softball ... totally dwarfs number of skaters & hockey players
- Reconsider “available elsewhere” criteria – we want to keep people in our community
- Reconsider “available privately” - not sure what this has to do with this process
- Specific scoring issues:
  - Indoor ice rink should be a 2 or a 3, not a 1, since it is not available elsewhere
  - Aquatic Center
    - Cost is estimated at 10-12 million, not original 20 million, score should reflect this
    - Wide variety of water sports and activities
    - Funding availability should be a 2 (by joining with School District, more money may be available than just with bonding)

- Scores for tourism, multiple uses-national/international/elite should be higher
  - Potential partnering should be a 3 for both
  - Multiple uses-national international elite should be a 3
  - Funding ability should be a 2
  - Maintenance should be a 2
  - Flexibility should be a 2 or 3 with new expanded facility
  - Tourism should be a 3
- Any facility is going to have capital and maintenance costs – shouldn't be a factor
- Fix evaluation criteria for flexibility – out of order
- Public/Private partnership is better than bonding and would produce faster results
- Find out how much money you have to spend before you figure out what to build
- Need to get debts paid for before building something new
- Innovate with existing facilities and lands
  - partner with private companies/organizations like rockcreation.com and winningice.com
  - expand hours of existing facilities/maximize programming at existing facilities
- Wellness is a public good
- Affordable, available recreation is important
- Measure so you can manage (demand study is an example)
  - Surveys and studies should be done on an on-going basis (Good data is priceless. Keep after it.)
- Don't see weighting – cost should be weighted heavily (both capital and operational)
- Perform an internal analysis of utilization and realization of existing assets
  - under-utilized facilities can be remedied with better programming, awareness, and incentives
  - Give manager these five criteria and stack rank them: return on assets, citizens served, recruit visitors and build outside revenues, carry PC brand outside the county, youth programming. Then each manager knows where they must invest and improve.

- Find soft dollars to improve the programming before expanding or adding new facilities
- Centralize recreation programming by sport or facility class instead of organizing by asset
- Put it all online – court and other scheduling
  - build a bigger data set so you know how existing facilities are being used and how they can be maximized
  - having contact information allows more community involvement
  - reduces admin cost of staff to schedule and register participation
  - allows alerts when court opens up, class has been scheduled, or visitor is looking for competition
  - prioritizes city court or trailside walk-ons lower than registered rec pass owners who schedule a court in advance
  - allows automated nominal fee collection for usage and late cancellation
- Talent: Keep finding great talent to manage facilities and support them in expanding their skills and knowledge
- Technology: Don't repeat past mistakes with bad software. Build a good database, put everything online (scheduling, etc.), GPS guides to trails, events, and facilities.
- Will our taxes go up for all this neat stuff or will existing taxes cover all of this? Make people aware that it will require further taxes to provide our wants
- Meeting should have been discussion/presentation with question and answer. Reading charts isn't interactive community input. Hope next meeting is a discussion.
- Prioritization should not be polarity contest, or who can rally the most people to yell the loudest. Opinion collection process is not very well-designed.
- Continue as one entity with School District as an equal partner
- Don't agree with high ranking of 2<sup>nd</sup> Ice Sheet
  - Neither the public opinion survey or the demand study addresses the cost of a 2<sup>nd</sup> Ice Sheet
  - As facility ages, maintenance costs will increase
- Let private enterprises build and users pay for their specialized interests like kite boarding, equestrian facilities, ice rink.

- Survey from last fall made it difficult to rank priorities. We have enough trails, public and private swimming pools, tennis facilities, skate-skiing track, and ice
- Need scientific, objective assessment that looks at what demands the most need and benefits the most citizens.
- Needed to have input sessions in the evenings
- Would like to have been able to rank priorities online and use an online survey
- Having input sessions during the workday on a single day severely limited input
